pH and pOH calculations can be challenging, but this PDF worksheet provides a comprehensive review of the topic. The useful relationships to remember are $\text{pH} = -\log[\text{H}^+]$ and $\text{pOH} = -\log[\text{OH}^-]$, as well as the equilibrium constant $K_w = [\text{H}^+][\text{OH}^-] = 1 \times 10^{-14}$. This downloadable PDF includes 40 multi-part chemistry problems that cover calculating pH, pOH, concentrations of H^+ and OH^- ions, acid-base titrations, and more. Look at the picture and match it with one of four words provided. Choose the word that best fits what you see and color it accordingly. This activity was designed to challenge learners. This activity, created by Chris Difficulty, involves tracing words and matching them to their corresponding images. A line should be drawn from each word to its correct image, and then both the word and image can be colored. Another level of difficulty is added with a sentence that needs to be unscrambled by writing the correct words in the provided lines, after which the associated image should be colored. The final task involves practicing common vocabulary by coloring an accompanying image. This exercise, designed for learners, encourages them to focus on recognizing and using familiar words. Students can also practice their skills by attempting to write words modeled after ones shown on the left side of the activity. For a slightly easier challenge, students may be asked to trace these words with guidance before trying to write them freehand across the rest of the line. A more complex version involves finding words within a word search puzzle by searching horizontally, vertically, or diagonally through it.
