You get all the tools you need to create professional desktop, enterprise, web, and mobile applications with the Java language, C/C++, and even dynamic languages such as PHP, JavaScript, Groovy, and Ruby. Apache NetBeans is easy to install and use straight out of the box and runs on many platforms including Windows, Linux, Mac OS X and Solaris. Also the app greatly extends the capabilities of the commandline tool. Apache NetBeans can execute the shell as an agent, similar to a debugging agent, on the debugged or run application (currently only J2SE applications are supported, both Ant and Maven-based). Snippets written in JShell can be redefined and tested, even against a running code. When the prototype is ready, it can be saved to a regular Java source file and integrated with the project.
